As an increasing amount of diverse material is made publicly available on campus computer systems, universities face some provocative new areas of concern. When the University of California at Berkeley's Information Systems and Technology (IST) department began developing its Infocal campus information service, it had an important responsibility to develop the system so that the University's vulnerability to legal action and adverse publicity was minimized. A formal information policy was needed, and it was established by means of an advisory committee. In July 1991, the committee finalized its recommendations. These recommendations, which are included in the paper, have been implemented.
