The Public-Access Computer Systems Review  
Volume 1, Number 1 (1990)  
Editor-In-Chief: Charles W. Bailey, Jr.  
University of Houston  
Associate Editor: Mike Ridley, McMaster University  
Editorial Board: Walt Crawford, Research Libraries Group  
Nancy Evans, Carnegie-Mellon University  
David R. McDonald, University of Michigan  
R. Bruce Miller, University of California,  
San Diego  
Paul Evan Peters, New York Public Library  
Peter Stone, University of Sussex  
  
Published three times a year (January, May, and September) by  
the University Libraries, University of Houston. Technical  
support is provided by the Information Technology Division,  
University of Houston.  
  
DEADLINE for the next issue is April 2, 1990.  
  
Editor's Address: Charles W. Bailey, Jr.  
University Libraries  
University of Houston  
Houston, TX 77204-2091  
(713) 749-4241

Editorial (page 4)

Communications

Text Management Software  
Sue Stigleman (pages 5-22)

An overview of five kinds of text management software:  
text retrieval, text database managers, bibliography

formatting, hypertext, and text analysis. Examines roles for libraries in helping patrons utilize this software.

Computer-Assisted Instruction for Music Uniform Titles  
R. Michael Fling (pages 23-33)

Describes Making the Most of the Music Library:  
Using Uniform Titles, a CAI program at the Indiana  
University Music Library.

To retrieve this file: GET FLING PRV1N1

Expansion and Testing of a Meridian CD-ROM Network  
James Jay Morgan (pages 34-42)

Discusses the expansion and performance testing of a  
Meridian CD Net system running on an IBM Token-Ring network.  
This work was done at the Indiana University School of  
Medicine Library.

To retrieve this file: GET MORGAN PRV1N1

Electronic Access to Library Systems for Users With  
Physical Disabilities  
Norman Coombs (pages 43-47)

Examines how libraries can utilize computer technology to  
improve services to disabled library users.

By Charles W. Bailey, Jr.

Welcome to the Public-Access Computer Systems Review. The PACS Review publishes articles about all types of computer systems that libraries make available to their patrons. These include catalog systems (e.g., online catalogs and public use of bibliographic utilities), CD-ROM databases, computer-assisted instruction programs, end-user search services (e.g., Knowledge Index), expert systems, hypermedia programs, local multi-user database systems (e.g., BRS/Search), microcomputer facilities, and other public computer systems. The PACS Review also publishes articles about new computer technologies that are utilized to implement these systems. The PACS Review does not deal with integrated library systems (e.g., NOTIS), except as these systems are used by library patrons.

The PACS Review is an electronic journal. Articles are stored as files on the PACS Forum list server. The Contents section is sent to all PACS Forum users, who can retrieve articles of interest from the list server by following the instructions contained in that section. It is anticipated that most users will want to print the retrieved article files using their institutional mainframe computers or, for downloaded files, their PCs.

I wish to thank the members of the PACS Review Editorial Board for their useful suggestions (and lively debate) about the potentials and problems of this electronic publishing venture. If such a thing is possible, I have taken a "middle-of-the-road" approach to this electronic journal, deliberately incorporating certain aspects of traditional journals (e.g., pages) that may be artifacts of the print medium. More radical approaches were discussed, but I decided to start off a more moderate initial strategy. Nonetheless, I feel this is a pioneering venture, and I look forward to receiving your comments and article submissions.
